The above table gives an overview of the financial indicators of the municipality for the period ended 30 June 2024 and the indicators are broken down below.

# **Borrowing Management**

The outstanding amount in the loan from DBSA is currently sitting at R17 010 024.23 as of 30 June 2024.

# **Liquidity**

**Current Ratio**: is calculated by a total of Current Assets/ Current Liabilities.

**Budgeted Current Ratio**: R641 156/R385 277= **1.66:1** 

Actual Current Ratio as of 30 June 2024: R834 930/R401 543= 2.07:1

The current ratio is a liquidity ratio used to measure whether the municipality has enough resources to meet its short-term obligations. A good ratio is R1.5-R2 for every R1 owed. The budget showed a R1.66: R1 ratio and the actual ratio as of 30 June 2024 is: R2.07: R1 which is above the norm.

Acid test Ratio: Current Assets- Inventory/Current Liabilities.

Budgeted Acid test Ratio: (R641 156-R 14 612)/R385 277 =1.62:1

Actual Acid test Ratio as 30 June 2024: : (R834 930-R11 251)/R 431 609 = 1.9:1

The acid-test ratio, commonly known as the quick ratio, uses an organization's balance sheet data as an indicator of whether it has sufficient short-term assets to cover its short-term liabilities. The acid-test ratio disregards current assets that are difficult to quickly liquidate such as inventory. The acid-test ratio may not give a reliable picture of an organization's financial condition if the municipality has accounts receivable that take longer than usual to collect or current liabilities that are due but have no immediate payment needed. A good ratio is R1 for every R1 owed. Both budgeted and actual to date acid test ratio are more than R1:R1 which shows that the municipality would be able to pay it short term liabilities with its easily liquidated short term assets.

The above table provides a concise overview of the monthly actual, year to date actual of the operating expenditure, capital expenditure, and age analysis. The full year forecast as seen the table above takes in the account the original budget less the YTD budget plus the YTD actual, this therefore gives a projection based on the YTD performance on how the municipality will perform for the financial year in terms of the original budget.
