The above table gives an overview of the financial indicators of the municipality for the 4<sup>th</sup> Quarter 30 June 2024.

#### **Borrowing Management**

The outstanding amount in the loan from DBSA is currently sitting at R17 010 024.33 as of 30 June 2024.

#### **Liquidity**

**<u>Current Ratio</u>**: is calculated by a total of Current Assets / Current Liabilities.

Adjusted Budgeted Current Ratio: R641 156 000/R 385 227 000= 1.66:1

Actual Current Ratio as of 31 March 2024: R 834 930 000/R 401 543 000 = 2.08:1

Current ratio is a liquidity ratio used to measure whether the municipality has enough resources to meet its short-term obligations. A good ratio is R1.5-R2 for every R1 owed. The adjusted budget showed a R1.66: R1 ratio and the actual ratio as of 30 June 2024 is R2.08:1 which is still above the norm.

Acid test Ratio: Current Assets- Inventory/Current Liabilities.

Adjusted Budgeted Acid test Ratio: (R 641 156 000-R14 612 000)/R 385 227 000 =1.63:1

Actual Acid test Ratio as 30 June 2024: (R 834 930 000-R11 257 000)/R 401 543 000 = 2.05:1

The acid-test ratio, commonly known as the quick ratio, uses an organization's balance sheet data as an indicator of whether it has sufficient short-term assets to cover its short-term liabilities. The acid-test ratio disregards current assets that are difficult to quickly liquidate such as inventory. The acid-test ratio may not give a reliable picture of an organization's financial condition if the municipality has accounts receivable that take longer than usual to collect or current liabilities that are due but have no immediate payment needed. A good ratio is R1 for every R1 owed. Both budgeted and actual to date acid test ratio are more than R1:R1 which shows that the municipality would be able to pay it short term liabilities with its easily liquidated short term assets.

The above table provides a concise overview of the monthly actual, year to date actual of the operating expenditure, capital expenditure, and age analysis. The full year forecast as seen the table above takes in the account the original budget less the YTD budget plus the YTD actual, this therefore gives a projection based on the YTD performance on how the municipality will perform for the financial year in terms of the original budget.
